                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               http://ftp.genome.washington.edu/RM/RepeatMasker.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequencing reads that have not been assembled into
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      will be sequenced to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes human and mouse spastin, and mutated CC human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay CC (ARSACS)) gene sequences (I). The spastin gene has been mapped to CC chromosome 13q11. (I) have neuroprotective activities and can be used in CG gene therapy and as a spastin polypeptide agonists. (I), their fragments CC or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for assaying the presence of a nucleic diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, CC atrophy of upper cerebellar vermis, absence of Purkinje cells and abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome CC markers, to identify genetic disorders, as hybridisation probes or CC markers, to identify genetic disorders, as hybridisation probes or CC markers, to identify and express recombinant protein for CC analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from CC in which the corresponding protein is expressed. Diagnostic methods from CC in researt invention can be used to identify subjects having or at risk of developing a disorder associated with aberrant expression CC correction or spastin gene expression or activity. The present sequence is not given in the present specification but
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                            gene therapy and as a spastin polypeptide agonists. (I), their fragments or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or adding in the diagnosis of an early onset neurodegenerative disease in an individual. The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, atrophy of upper cerebellar vermis, absence of Purkinje cells and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated polynucleotide, encoding spastin gene, and polypeptides, useful for diagnosing autosomal recessive spastic ataxia of Charlevoix-Saguenay disease by detecting two point mutations in spast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 neurodegenerative disease; reduced sensory nerve conduction; diagnosis; reduced motor nerve velocity; hypermyelination of retinal nerve fibre; atrophy of upper cerebellar vermis; absence of Purkinje cell;
                                                                                                                                                                                                                                                                      The present invention describes human and mouse spastin, and mutated human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay (ARSACS)) gene sequences (I). The spastin gene has been mapped to
                                                                                                                                                                                                                                                   chromosome 13q11.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   gene sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          20-OCT-2000; 2000WO-US29130

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antisense nucleic acids, is useful as molecular weight or chromosome markers, to identify genetic disorders, as hybridisation probes or primers, as an antigen, identify and express recombinant protein for analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression
                                            autosomal recessive spastic ataxia of Charlevoix-Saguenay; mutation; neurodegenerative disease; reduced sensory nerve conduction; diagnosis; reduced motor nerve velocity; hypermyelination of retinal nerve fibre; atrophy of upper cerebellar vermis; absence of Purkinje cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                of developing a disease or disorder associated with aberrant expression or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin protein or spastin gene expression or activity. The present sequence encodes human spastin as given in the present invention.

The present invention describes human and mouse spastin, and mutated CC human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay CC (ARSACS)) gene sequences (I). The spastin gene has been mapped to CC chromosome 13q11. (I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists. (I), their fragments CC or their complements can be useful for assaying the presence of a nucleic CC acid molecule in a sample. (I) is useful for diagnosing or aiding in the CC diagnosis of an early onset neurodegenerative disease in an individual. CC The neurodegenerative disease reduced sensory nerve conduction, CC reduced motor nerve velocity, hypermyelination of retinal nerve fibres, CC antiphy of upper cerebellar vermis, absence of purkinje cells and CC abnormal neuronal lipid storage. (I) can also be used to produce CC antisense nucleic acids, is useful as molecular weight or chromosome CC markers, to identify genetic disorders, as hybridisation probes or CC primers, as an antigen, identify and express recombinant protein for CC canalysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed. Diagnostic methods from CC the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aboreant expression.
                                                                            of developing a disease or disorder associated with aberrant expression or activity of (I). The assays can be utilised to identify a subject having or at risk of developing a disorder associated with Spastin protein or spastin gene expression or activity. The present sequence represents a mutated human spastin gene from the present invention.

N.B. The present sequence is not given in the present specification but
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polynucleotide, encoding spastin gene, and polypeptides, useful for diagnosing autosomal recessive spastic ataxia of Charlevoix-Saguenay disease by detecting two point mutations in spast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ₽
The present invention describes human and mouse spastin, and mutated human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay (ARSACS)) gene sequences (I). The spastin gene has been mapped to chromosome 13q11. (I) have neuroprotective activities and can be used in gene therapy and as a spastin polypeptide agonists. (I), their fragments or their complements can be useful for assaying the presence of a nucleic acid molecule in a sample. (I) is useful for diagnosing or aiding in the diagnosis of an early onset neurodegenerative disease in an individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; mouse; spastin; ARSACS; chromosome 13q11; identification; autosomal recessive spastic ataxia of Charlevoix-Saguenay; mutation; neurodegenerative disease; reduced sensory nerve conduction; diagnos; reduced motor nerve velocity; hypermyelination of retinal nerve fibratrophy of upper cerebellar vermis; absence of Purkinje cell; abnormal neuronal lipid storage; genetic disorder; characterisation;
                                                                                                                                   Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The neurodegenerative disease comprises reduced sensory nerve conduction, CC reduced motor nerve velocity, hypermyelination of retinal nerve fibres, CC atrophy of upper cerebellar vermis, absence of Purkinje cells and CC abnormal neuronal lipid storage. (I) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome CC markers, to identify genetic disorders, as hybridisation probes or CC primers, as an antigen, identify and express recombinant protein for analysis, characterisation or therapeutic use, or as markers for tissues CC in which the corresponding protein is expressed. Diagnostic methods from CC in expressent invention can be used to identify subjects having or at risk of developing a discase or disorder associated with aberrant expression CC or activity of (I). The assays can be utilised to identify a subject CA having or at risk of developing a disorder associated with spastin CC protein or spastin gene expression or activity. The present sequence encodes a mutated human spastin nucleotide sequence (AAH20174) as CC stated on page 14.

CC The present invention describes human and mouse spastin, and mutated CC human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay CC (ARSACS)) gene sequences (I). The spastin gene has been mapped to CC chromosome 13qll. (I) have neuroprotective activities and can be used in CC gene therapy and as a spastin polypeptide agonists. (I), their fragments CC or their complements can be useful for assaying the presence of a nucleic CC acid molecule in a sample. (I) is useful for diagnosing or aiding in the CC diagnosis of an early onset neurodegenerative disease in an individual. CC The neurodegenerative disease comprises reduced sensory nerve conduction, CC reduced motor nerve velocity, hypermyslination of retinal nerve fibres, CC atrophy of upper cerebellar vermis, absence of putkinje cells and CC abnormal neuronal lipid storage. (I) can also be used to produce CC markers, to identify genetic disorders, as molecular weight or chromosome CC markers, to identify genetic disorders, as hybridisation probes or CC analysis, characterisation or therapeutic use, or as markers for tissues the present invention can be used to identify subjects having or at risk CC of developing a disease or disorder associated with aberrant expression

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   gene their complements can be useful for assaying the presence of a nucleic card molecule in a sample. (I) is useful for disgnosing or aiding in the CC diagnosis of an early onset neurodegenerative disease in an individual.

The neurodegenerative disease comprises reduced sensory nerve conduction, reduced motor nerve velocity, hypermyelination of retinal nerve fibres, a trophy of upper cerebellar vermis, absence of purkinje cells and antisense nucleic acids, is useful as molecular weight or chromosome can markers, to identify genetic disorders, as hybridisation probes or primers, as an antigen, identify and express recombinant protein for analysis, characterisation or therapeutic use, or as markers for tissues in which the corresponding protein is expressed Diagnostic methods from the present invention can be used to identify subjects having or at risk of developing a disease or disorder associated with aberrant expression protein or spastin gene expression or activity. The present sequence

Chromosome 13q11. (1) have neuroprotective activities and can be used in CC gene therapy and as a spastin polypeptide agonists. (1) their fragments CC or their complements can be useful for assaying the presence of a nucleic caid molecule in a sample. (1) is useful for assaying the presence of a nucleic caid molecule in a sample. (1) is useful for diagnosing or aiding in the CC diagnosis of an early onset neurodegenerative disease in an individual. CC reduced motor nerve velocity, hypermyelination of retinal nerve fibres, catrophy of upper cerebellar vermis, absence of Purkinje cells and CC abnormal neuronal lipid storage. (1) can also be used to produce antisense nucleic acids, is useful as molecular weight or chromosome cc markers, to identify genetic disorders, as hybridisation probes or crimers, as an antigen, identify and express recombinant protein for cc analysis, characterisation or therapeutic use, or as markers for its companies of the present invention can be used to identify subjects having or at risk of developing a disorder associated with aberrant expression or activity of (1). The assays can be utilised to identify a subject having or spastin gene expression or activity. AAH20122 to AAH20173 represent specifically claimed primers which can be used in diagnostic mather the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated polynucleotide, encoding spastin gene, and polypeptides, useful for diagnosing autosomal recessive spastic ataxia of Charlevoix-Saguenay disease by detecting two point mutations in spastin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes human and mouse spastin, and mutated human spastin (autosomal recessive spastic ataxia of Charlevoix-Saguenay (ARSACS)) gene sequences (I). The spastin gene has been mapped to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             improve tolerance to disease, drought or other stress. Increased senescence may more rapidly break down unwanted plant material and so avoid the use of desiccants on crops. This sequence represents the proposed full length sequence of the senescence down-regulating clone, pSEND31, which is also known as 1M4. pSEND31 is a cDNA of approx. 0.9 kb encoding a mRNA of approx. 1.0 kb. The mRNA encoded by pSEND31 is expressed in green leaves of tomato plants, but at the onset of senescence its expression is switched off. The pSEND31 sequence exhibits 100% homology to the tomato cDNA clone TAS14 which is inducible by salt stress and ABA in tomato seedlings. Southern analysis suggests that there is one gene per haploid genome. This gene is specifically reduced during tomato leaf senescence. pSEND31 is deposited as NCIMB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        in plants including tomato, lettuce, cabbage, banana, strawberr wheat, maize, rice, rape or soybean. Delayed senescence may indirectly prolong the life of the plant, increase yield, increprotein content of fruits, improve quality of leafy vegetables,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequences given in AAT35095-133 are senescence related genes a fragments which were used in the construct of the invention which modifies the expression of at least one senescence related gene. Using these constructs senescence may be inhibited or accelerated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Drake
                                                                                                                                                                                                                                                                                      DNA encoding novel human diagnostic protein #19073.

The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) and its binding partners against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polypucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and anino acid sequences. AAS64197-AAS94564 represent novel human contains and activity, but was obtained in electronic format directly from WIPO specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polynucleotide and encoded polypeptides, useful in diagnostics; forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess the discrete for genetic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel genes (AAH68727-AAH73383) associated with cervical cancer with cytostaric activity. The nucleic acids and encoded polypeptides are useful: to assess if a patient is afflicted with cervical cancer or has a pre-malignant condition; to monitor the progression of cervical cancer or a premalignant condition in a patient; and to select and/or assess the efficacy of a compound or therapy for inhibiting cervical cancer in a patient. The nucleic acids may also be

                                                                                                                                                                                             that protein encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the S.aureus DNA sequences contained on the
                                                                                                                                                                                                                                                                                                                                                                                                                    medium, prefer memory (RAM),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Polynucleotide(s) and proteins derived stored on computer readable medium and anti-S.aureus vaccines

The inventuaseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL161840-ABL16175) and the encoded proteins

       The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                     Ota T,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides a number of human immune system associate genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                 Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detecti and/or diagnosis of the abnormality of the proteins encoded by the

The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent buman cDNA sequences; AAB92446 to AAB95893 represent thuman amino acid sequences; and AAH13632 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
   The present sequence encodes a BASB119 polypeptide of Moraxella catarrhalis strain ATCC43617. BASB119 polypeptides and polynucleotides are useful for generating an immune response in an animal. The polypeptides may also be used as prophylactic agents of bacterial

                                                  invasive diseases, chronic otitis media with hearing loss, fluid accumulation in the middle ear, infection of the upper respiratory tract, or inflammation of the middle ear. The polypeptides or polynucleotides may also be employed as research reagents and materials for discovering treatments of and diagnostics for diseases, particularly human diseases. In particular, the polypeptides or polynucleotides are useful in the discovery and development of antibacterial compounds, or for diagnosing diseases, staging of the disease, determining the response of an infectious organism to drugs.
                                                                                                                                                                                                                                                                                              infections, particularly M. catarrnalis infections with the polynocleotides are useful in therapy or prophylaxis, particularly genetic immunization against these infections or diseases. These diseases include otitis media in infants or children, pneumonia in elderlies, sinusitis, nosocomial infections and children.
